

Package ‘giscoR’

April 13, 2021

Type Package

Title Download Map Data from GISCO API - Eurostat

Version 0.2.4

Description Tools to download data from the GISCO
(Geographic Information System of the Commission) Eurostat database
<<https://ec.europa.eu/eurostat/web/gisco>>. Global and European map data available.
This package is in no way officially related to or endorsed by Eurostat.

License GPL-3

Encoding UTF-8

RoxygenNote 7.1.1

BugReports <https://github.com/dieghernan/giscoR/issues>

URL <https://dieghernan.github.io/giscoR/>,
<https://github.com/dieghernan/giscoR>

Depends R (>= 3.6.0)

Imports sf (>= 0.9), lwgeom (>= 0.2-2), countrycode (>= 1.2.0),
geojsonsf (>= 2.0)

Suggests tmap (>= 3.0), tinytest, knitr, rmarkdown

giscoR-package	<i>Download geospatial data from GISCO API - Eurostat</i>
----------------	---

Description

giscoR is a API package that helps to retrieve data from Eurostat - GISCO (the Geographic Information System of the COMmission)

Details

giscoR package

Package	giscoR
Type	Package
Version	See sessionInfo() or DESCRIPTION file
Date	2021
License	GPL-3
LazyLoad	yes

Note

COPYRIGHT NOTICE

When data downloaded from <https://ec.europa.eu/eurostat/web/gisco/geodata/reference-data/administrative-units-statistical-units> is used in any printed or electronic publication, in addition to any other provisions applicable to the whole Eurostat website, data source will have to be acknowledged in the legend of the map and in the introductory page of the publication with the

following copyright notice:

- EN: (C) EuroGeographics for the administrative boundaries
- FR: (C) EuroGeographics pour les limites administratives
- DE: (C) EuroGeographics bezüglich der Verwaltungsgrenzen

For publications in languages other than English, French or German, the translation of the copyright notice in the language of the publication shall be used.

If you intend to use the data commercially, please contact EuroGeographics for information regarding their licence agreements.

gisco_attributions *Attribution when publishing GISCO data*

Description

Get the legal text to be used along with the data downloaded with this package

Usage

```
gisco_attributions(lang = "en", copyright = FALSE)
```

Arguments

lang	Language (two-letter ISO code). See https://en.wikipedia.org/wiki/List_of_ISO_639-1_codes and Details.
copyright	Boolean. Whether to display the copyright notice or not on the console.

Details

Current languages supported are:

- "en" - English
- "da" - Danish
- "de" - German
- "es" - Spanish
- "fi" - Finish
- "fr" - French
- "no" - Norwegian
- "sv" - Swedish

Consider contributing if you spot any mistake or want to add a new language.

Value

A string with the attribution to be used.

Note

COPYRIGHT NOTICE

When data downloaded from GISCO is used in any printed or electronic publication, in addition to any other provisions applicable to the whole Eurostat website, data source will have to be acknowledged in the legend of the map and in the introductory page of the publication with the following copyright notice:

- EN: (C) EuroGeographics for the administrative boundaries
- FR: (C) EuroGeographics pour les limites administratives
- DE: (C) EuroGeographics bezüglich der Verwaltungsgrenzen

For publications in languages other than English, French or German, the translation of the copyright notice in the language of the publication shall be used.

If you intend to use the data commercially, please contact EuroGeographics for information regarding their licence agreements.

Examples

```
en <- gisco_attributions()

gisco_attributions(lang = "es", copyright = TRUE)

gisco_attributions(lang = "XXX")
```

gisco_bulk_download *Bulk download from GISCO API*

Description

Downloads zipped data from GISCO and extract them on the cache_dir folder.

Usage

```
gisco_bulk_download(
  id_giscoR = "countries",
  year = "2016",
  cache_dir = NULL,
  update_cache = FALSE,
  verbose = FALSE,
  resolution = "10",
  ext = "geojson",
  recursive = TRUE
)
```

Arguments

id_giscoR	Type of dataset to be downloaded. Values supported are: <ul style="list-style-type: none"> • "coastallines" • "communes" • "countries" • "lau" • "nuts" • "urban_audit"
year	Release year. See Release years available on gisco_get .
cache_dir	A path to a cache directory. See Details on gisco_get .
update_cache	A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source .geojson file.
verbose	Display information. Useful for debugging, default is FALSE.
resolution	Resolution of the geospatial data. One of <ul style="list-style-type: none"> • "60": 1:60million • "20": 1:20million • "10": 1:10million • "03": 1:3million • "01": 1:1million
ext	Extension of the file(s) to be downloaded. Available formats are "geojson", "shp", "svg", "json", "gdb". See Details.
recursive	Tries to unzip recursively the zip files (if any) included in the initial bulk download (case of ext = "shp").

Details

See the years available in [gisco_get](#)

The usual extension used across **giscoR** is "geojson", however other formats are already available on GISCO.

This function helps building a personal shape library on cache_dir (or options(gisco_cache_dir = "path/to/dir"), if set by the user).

Value

Silent function.

Note

For downloading specific files use [gisco_get](#) functions.

Source

<https://gisco-services.ec.europa.eu/distribution/v2/>

Examples

```
## Not run:  
  
# Countries 2016 - It would take some time  
gisco_bulk_download(id_giscoR = "countries", resolution = "60")  
  
## End(Not run)
```

gisco_check_access *Check access to GISCO API*

Description

Check if R has access to resources at <https://gisco-services.ec.europa.eu/distribution/v2/>.

Usage

```
gisco_check_access()
```

Value

a logical.

Examples

```
gisco_check_access()
```

gisco_coastallines *World coastal lines* POLYGON object

Description

A sf object as provided by GISCO (2016 version).

Format

A POLYGON data frame (resolution: 1:20million, EPSG:4326) object with 3 variables:

- **FID**
- **COAS_ID**
- **geometry**: geometry field

Source

[COAS_RG_20M_2016_4326.geojson](#) file.

See Also

[gisco_get_coastallines\(\)](#)

Examples

```
library(sf)

coasts <- gisco_coastallines

plot(
  st_geometry(coasts),
  xlim = c(100, 120),
  ylim = c(-24, 24),
  col = "grey90",
  border = "deepskyblue4",
  lwd = 2
)
box()
title(
  main = "Coasts on Southeastern Asia",
  sub = gisco_attributions(),
  cex.sub = 0.7,
  line = 1
)
```

gisco_countries *World countries* POLYGON object

Description

A sf object including all countries as provided by GISCO (2016 version).

Format

A MULTIPOLYGON data frame (resolution: 1:20million, EPSG:4326) object with 257 rows and 7 variables:

- **id**: row ID
- **CNTR_NAME**: Official country name on local language
- **ISO3_CODE**: ISO 3166-1 alpha-3 code of each country, as provided by GISCO
- **CNTR_ID**: Country ID
- **NAME_ENGL**: Country name in English
- **FID**: FID
- **geometry**: geometry field

Source

[CNTR_RG_20M_2016_4326.geojson](#) file.

See Also

[gisco_get_countries\(\)](#)

Examples

```
library(sf)

cntry <- gisco_countries
GBR <- subset(cntry, ISO3_CODE == "GBR")

plot(st_geometry(GBR), col = "red3", border = "blue4")
title(sub = gisco_attributions(), line = 1)
```

gisco_countrycode *Dataframe with different country code schemes and world regions*

Description

A dataframe containing conversions between different country code schemes (Eurostat/ISO2 and 3) as well as geographic regions as provided by the World Bank and the UN (M49). This dataset is extracted from **countrycode** package.

Format

A data frame object with 249 rows and 12 variables:

- **CNTR_CODE**: Eurostat code of each country
- **iso2c**: ISO 3166-1 alpha-2 code of each country
- **ISO3_CODE**: ISO 3166-1 alpha-3 code of each country
- **iso.name.en**: ISO English short name
- **cldr.short.en**: English short name as provided by the Unicode Common Locale Data Repository <http://cldr.unicode.org/translation/displaynames/country-names>
- **continent**: As provided by the World Bank
- **un.region.code**: Numeric region code UN (M49)
- **un.region.name**: Region name UN (M49)
- **un.regionintermediate.code**: Numeric intermediate Region code UN (M49)
- **un.regionintermediate.name**: Intermediate Region name UN (M49)
- **un.regionsub.code**: Numeric sub-region code UN (M49)
- **un.regionsub.name**: Sub-Region name UN (M49)
- **eu**: Logical indicating if the country belongs to the European Union as per February 2021.

Examples

```
data(gisco_countrycode)
```

gisco_db	<i>GISCO database</i>
----------	-----------------------

Description

Database with the list of files that the package can load.

Format

A data frame

Details

This dataframe is used to check the validity of the API calls.

Source

GISCO API datasets.json.

Examples

```
data(gisco_db)
```

gisco_get	<i>Get geospatial data from GISCO API</i>
-----------	---

Description

Loads a simple feature (sf) object from GISCO API entry point or your local library.

Usage

```
gisco_get_coastallines(  
  year = "2016",  
  epsg = "4326",  
  cache = TRUE,  
  update_cache = FALSE,  
  cache_dir = NULL,  
  verbose = FALSE,  
  resolution = "20"  
)  
  
gisco_get_communes(  
  year = "2016",  
  epsg = "4326",
```

```
    cache = TRUE,  
    update_cache = FALSE,  
    cache_dir = NULL,  
    verbose = FALSE,  
    spatialtype = "RG",  
    country = NULL  
  )
```

```
gisco_get_countries(  
  year = "2016",  
  epsg = "4326",  
  cache = TRUE,  
  update_cache = FALSE,  
  cache_dir = NULL,  
  verbose = FALSE,  
  resolution = "20",  
  spatialtype = "RG",  
  country = NULL,  
  region = NULL  
)
```

```
gisco_get_lau(  
  year = "2016",  
  epsg = "4326",  
  cache = TRUE,  
  update_cache = FALSE,  
  cache_dir = NULL,  
  verbose = FALSE,  
  country = NULL,  
  gisco_id = NULL  
)
```

```
gisco_get_nuts(  
  year = "2016",  
  epsg = "4326",  
  cache = TRUE,  
  update_cache = FALSE,  
  cache_dir = NULL,  
  verbose = FALSE,  
  resolution = "20",  
  spatialtype = "RG",  
  country = NULL,  
  nuts_id = NULL,  
  nuts_level = "all"  
)
```

```
gisco_get_urban_audit(  
  year = "2020",
```

```

    epsg = "4326",
    cache = TRUE,
    update_cache = FALSE,
    cache_dir = NULL,
    verbose = FALSE,
    spatialtype = "RG",
    country = NULL,
    level = NULL
)

```

Arguments

year	Release year. See Release years available on gisco_get .
epsg	projection of the map: 4-digit EPSG code . One of: <ul style="list-style-type: none"> • "4258": ETRS89 • "4326": WGS84 • "3035": ETRS89 / ETRS-LAEA • "3857": Pseudo-Mercator
cache	A logical whether to do caching. Default is TRUE.
update_cache	A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source <code>.geojson</code> file.
cache_dir	A path to a cache directory. See Details on gisco_get .
verbose	Display information. Useful for debugging, default is FALSE.
resolution	Resolution of the geospatial data. One of <ul style="list-style-type: none"> • "60": 1:60million • "20": 1:20million • "10": 1:10million • "03": 1:3million • "01": 1:1million
spatialtype	Type of geometry to be returned: <ul style="list-style-type: none"> • "RG": Regions - MULTIPOLYGON/POLYGON object. • "LB": Labels - POINT object. • "BN": Boundaries - LINESTRING object. • "COASTL": coastlines - LINESTRING object. • "INLAND": inland boundaries - LINESTRING object.
country	Optional. A character vector of country codes. See Details on gisco_get .
region	Optional. A character vector of UN M49 region codes or European Union membership. Possible values are "Africa", "Americas", "Asia", "Europe", "Oceania" or "EU" for countries belonging to the European Union (as per 2021). See About world regions and gisco_countrycode
gisco_id	Optional. A character vector of GISCO_ID LAU values.
nuts_id	Optional. A character vector of NUTS IDs.

nuts_level	NUTS level. One of "0" (Country-level), "1", "2" or "3". See https://ec.europa.eu/eurostat/web/nuts/background .
level	Level of Urban Audit. Possible values are "CITIES", "FUA", "GREATER_CITIES" or NULL, that would download the full dataset.

Details

country only available on specific datasets. Some spatialtype options (as "BN", "COASTL", "INLAND") may not include country-level identifiers.

country could be either a vector of country names, a vector of ISO3 country codes or a vector of Eurostat country codes. Mixed types (as c("Turkey", "US", "FRA")) would not work.

Sometimes cached files may be corrupt. On that case, try re-downloading the data setting update_cache = TRUE.

Set cache_dir = "path/to/dir" or options(gisco_cache_dir = "path/to/dir"). If you experience any problem on download, try to download the corresponding .geojson file by any other method and save it on your cache_dir.

For a complete list of files available check [gisco_db](#).

Value

A sf object specified by spatialtype.

About world regions

Regions are defined as per the geographic regions defined by the UN (see <https://unstats.un.org/unsd/methodology/m49/>). Under this scheme Cyprus is assigned to Asia. You may use region = "EU" to get the EU members (reference date: 2021).

Release years available

- gisco_get_coastlines: one of "2006", "2010", "2013" or "2016".
- gisco_get_communes: one of "2001", "2004", "2006", "2008", "2010", "2013" or "2016".
- gisco_get_countries: one of "2001", "2006", "2010", "2013", "2016" or "2020".
- gisco_get_lau: one of "2016", "2017", "2018" or "2019"
- gisco_get_nuts: one of "2003", "2006", "2010", "2013", "2016" or "2021".
- gisco_get_urban_audit: one of "2001", "2004", "2014", "2018" or "2020".

Note

Please check the download and usage provisions on [gisco_attributions\(\)](#).

```

gisco_get_airports *Get location of airports and ports from GISCO API*

Description

Loads a simple feature (sf) object from GISCO API or your local library.

Usage

```
gisco_get_airports(year = "2013", country = NULL)
```

```
gisco_get_ports(year = "2013")
```

Arguments

year	Year of reference.
country	A list of countries, see gisco_get_countries()

Value

A POINT object on EPSG:4326.

Years available

- gisco_get_airports: "2006" and "2013"
- gisco_get_ports: "2009" and "2013"

Ports 2009 contains worldwide information, the rest of datasets refer to Europe. All shapefiles provided in EPSG:4326

Author(s)

dieghernan, <https://github.com/dieghernan/>

Source

<https://ec.europa.eu/eurostat/web/gisco/geodata/reference-data/transport-networks>

Examples

```
library(sf)

NL <- gisco_get_countries(country = "NL")
AirP_NL <- gisco_get_airports(country = "NL")

Ports <- gisco_get_ports()
# Intersect with NL
PortsNL <- st_intersection(Ports, NL)

plot(st_geometry(NL), col = "wheat")
plot(
  st_geometry(PortsNL),
  pch = 22,
  col = "forestgreen",
  add = TRUE,
  cex = 0.8
)

plot(
  st_geometry(AirP_NL),
  pch = 20,
  col = "steelblue",
  add = TRUE,
  cex = 1.2
)
legend(
  "topright",
  legend = c("Port", "Airport"),
  col = c("forestgreen", "steelblue"),
  cex = 0.9,
  bty = "n",
  pch = c(22, 20),
  pt.cex = c(1, 1.5),
  y.intersp = 2
)

title(
  main = "Transport Network on the Netherlands",
  sub = gisco_attributions(),
  line = 1,
  cex.sub = 0.7,
  font.sub = 3
)
```

Description

These datasets contain grid cells covering the European land territory, for various resolutions from 1km to 100km. Base statistics such as population figures are provided for these cells.

Usage

```
gisco_get_grid(  
  resolution = "20",  
  spatialtype = "REGION",  
  cache_dir = NULL,  
  update_cache = FALSE,  
  verbose = FALSE  
)
```

Arguments

resolution	Resolution of the grid cells on kms. Available values are "1", "2", "5", "10", "20", "50", "100". See Details
spatialtype	Select one of REGION,POINT
cache_dir	A path to a cache directory. See Details on gisco_get .
update_cache	A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source .geojson file.
verbose	Display information. Useful for debugging, default is FALSE.

Details

Files are distributed on EPSG:3035.

The file sizes range is from 428Kb (resolution = "100") to 1.7Gb resolution = "1". For resolutions 1km and 2km you would need to confirm the download.

Value

A POLYGON/POINT object.

Note

There are specific downloading provisions, please see <https://ec.europa.eu/eurostat/web/gisco/geodata/reference-data/grids>

Author(s)

dieghernan, <https://github.com/dieghernan/>

Source

<https://ec.europa.eu/eurostat/web/gisco/geodata/reference-data/grids>

Examples

```
library(sf)

grid <- gisco_get_grid(resolution = 20)
grid$popdens <- grid$TOT_P_2011 / 20

breaks <-
  c(
    0,
    500,
    1000,
    2500,
    5000,
    10000,
    25000,
    50000,
    max(grid$popdens) + 1
  )

pal <- hcl.colors(length(breaks) - 2, palette = "inferno", alpha = 0.7)
pal <- c("black", pal)

opar <- par(no.readonly = TRUE)
par(mar = c(0, 0, 0, 0), bg = "grey2")
plot(
  grid[, "popdens"],
  pal = pal,
  key.pos = NULL,
  breaks = breaks,
  main = NA,
  xlim = c(2500000, 7000000),
  ylim = c(1500000, 5200000),
  border = NA
)
par(opar)
```

gisco_get_healthcare *Get the healthcare services in Europe.*

Description

The dataset contains information on main healthcare services considered to be 'hospitals' by Member States.

Usage

```
gisco_get_healthcare(
  cache = TRUE,
  update_cache = FALSE,
```

```

    cache_dir = NULL,
    verbose = FALSE,
    country = NULL
)

```

Arguments

cache	A logical whether to do caching. Default is TRUE.
update_cache	A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source .geojson file.
cache_dir	A path to a cache directory. See Details on gisco_get .
verbose	Display information. Useful for debugging, default is FALSE.
country	Optional. A character vector of country codes. See Details on gisco_get .

Details

Files are distributed on EPSG:4326. Metadata available on <https://gisco-services.ec.europa.eu/pub/healthcare/metadata.pdf>.

Value

A POINT object.

[gisco_get](#)

gisco_get_units

Get geospatial units data from GISCO API

Description

Download individual shapefiles of units. Unlike [gisco_get_countries\(\)](#), [gisco_get_nuts\(\)](#) or [gisco_get_urban_audit\(\)](#), that downloads a full dataset and applies filters, [gisco_get_units\(\)](#) downloads a single shapefile for each unit.

Usage

```
gisco_get_units(
  id_giscoR = "nuts",
  unit = "ES4",
  mode = "sf",
  year = "2016",
  epsg = "4326",
  cache = TRUE,
  update_cache = FALSE,
  cache_dir = NULL,
  verbose = FALSE,
  resolution = "20",
  spatialtype = "RG"
)
```

Arguments

id_giscoR	Select the unit type to be downloaded. Accepted values are "nuts", "countries" or "urban_audit".
unit	Unit ID to be downloaded. See Details.
mode	Controls the output of the function. Possible values are "sf" or "df". See Value and Details.
year	Release year. See Release years available on gisco_get .
epsg	projection of the map: 4-digit EPSG code . One of: <ul style="list-style-type: none"> • "4258": ETRS89 • "4326": WGS84 • "3035": ETRS89 / ETRS-LAEA • "3857": Pseudo-Mercator
cache	A logical whether to do caching. Default is TRUE.
update_cache	A logical whether to update cache. Default is FALSE. When set to TRUE it would force a fresh download of the source .geojson file.
cache_dir	A path to a cache directory. See Details on gisco_get .
verbose	Display information. Useful for debugging, default is FALSE.
resolution	Resolution of the geospatial data. One of <ul style="list-style-type: none"> • "60": 1:60million • "20": 1:20million • "10": 1:10million • "03": 1:3million • "01": 1:1million
spatialtype	Type of geometry to be returned: "RG", for POLYGON and "LB" for POINT.

Details

The function can return a dataframe on mode = "df" or a sf object on mode = "sf".

In order to see the available unit ids with the required combination of spatialtype, year, first run the function on "df" mode. Once that you get the data frame you can select the required ids on the unit parameter.

On mode = "df" the only relevant parameters are spatialtype, year.

Value

A sf object on mode = "sf" or a dataframe on mode = "df".

Note

Country-level files would be renamed on your cache_dir to avoid naming conflicts with NUTS-0 datasets.

gisco_nuts

All NUTS POLYGON object

Description

A sf object including all NUTS levels as provided by GISCO (2016 version).

Format

A POLYGON data frame (resolution: 1:20million, EPSG:4326) object with 11 variables:

- **id**: row ID
- **COAST_TYPE**: COAST_TYPE
- **MOUNT_TYPE**: MOUNT_TYPE
- **NAME_LATN**: Name on Latin characters
- **CNTR_CODE**: Eurostat Country code
- **FID**: FID
- **NUTS_ID**: NUTS identifier
- **NUTS_NAME**: NUTS name on local alphabet
- **LEVL_CODE**: NUTS level code (0,1,2,3)
- **URBN_TYPE**: URBN_TYPE
- **geometry**: geometry field

  font.sub = 3
)
```

`tgs00026`*Disposable income of private households by NUTS 2 regions*

Description

The disposable income of private households is the balance of primary income (operating surplus/mixed income plus compensation of employees plus property income received minus property income paid) and the redistribution of income in cash. These transactions comprise social contributions paid, social benefits in cash received, current taxes on income and wealth paid, as well as other current transfers. Disposable income does not include social transfers in kind coming from public administrations or non-profit institutions serving households.

Format`data_frame:`

- **geo:** NUTS2 identifier
- **time:** reference year (2007 to 2018)
- **values:** value in euros
